

Quasiconformal Teichmuller Theory (Hardback)

By Frederick P. Gardiner, Nikola Lakic

American Mathematical Society, United States, 1999. Hardback. Book Condition: New. 256 x 178 mm. Language: English . Brand New Book. The Teichmuller space $\mathcal{T}(X)$ is the space of marked conformal structures on a given quasi conformal surface X . This volume uses quasi conformal mapping to give a unified and up-to-date treatment of $\mathcal{T}(X)$. Emphasis is placed on parts of the theory applicable to non compact surfaces and to surfaces possibly of infinite analytic type. The book provides a treatment of deformations of complex structures on infinite Riemann surfaces and gives background for further research in many areas. These include applications to fractal geometry, to three-dimensional manifolds through its relationship to Kleinian groups, and to one-dimensional dynamics through its relationship to quasi symmetric mappings. Many research problems in the application of function theory to geometry and dynamics are suggested.

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).
