Brand New Book ***** Print on Demand *****.Excerpt from Feeding Habits and Growth of Venus Mercenaria In a previous bulletin of the New York State Museum, attention was directed to the fact that both the hard clam, or little-neck, and the common long-neck clam were rapidly diminishing in numbers, not only in the waters of New York State, but also along the entire Atlantic coast where these forms have previously been found. After a careful examination of a large part of the coast of New England and Long Island, it appeared that the apprehensions of many market men and clammers concerning the growing scarcity of these forms were well founded. It was not intended that the attitude of an alarmist should be assumed. Clams still may be had at almost any hotel or restaurant. Even if the natural beds alone are depended on, as heretofore, a certain supply may be had for some time. But it is certainly true that, unless something is done to check or modify the indiscriminate and unintelligent methods of taking these forms now in vogue, the supply is finally to fail more or less completely everywhere, as it has already failed in many localities. That time is not remote. It is difficult for one not personally familiar with the clam flats and beaches, and their histories, to realize the truth of such a statement.
